Class Diagram of CampABridge

Aim: To study and design the Class Diagram for CampABridge.

Objective: To understand the classes, attributes, methods, and relationships used in the CampABridge system.

Introduction:

A Class Diagram is a UML structural diagram used to represent the classes, attributes, methods, and relationships inside a software system. It helps in understanding the overall object-oriented structure of the application. The Class Diagram of CampABridge represents important system classes such as User, Post, Message, Marketplace, Forum, and Lost & Found modules.

1. Class Diagram

Description:

The Class Diagram of CampABridge represents the major classes and their relationships. The User class is associated with posts, messages, marketplace items, forum discussions, and lost-and-found records. Each class contains attributes and methods representing its functionalities inside the system. The diagram helps in understanding the object-oriented structure and software design of the CampABridge platform.

2. Main Classes Explanation

- User class manages authentication and user details.
- Post class handles social media posts and image sharing.

- Message class manages real-time chat communication.
- Marketplace class manages buying and selling items.
- Forum class supports discussion topics and replies.
- LostFound class manages lost-and-found item reporting.

3. Advantages of Class Diagram

- Provides clear understanding of system structure
- Represents classes and relationships visually
- Supports object-oriented software design
- Helps in coding and implementation
- Improves maintainability and scalability

Conclusion:

The Class Diagram of CampABridge provides a structured representation of the system classes, attributes, methods, and relationships. It helps developers understand the object-oriented architecture and supports effective software design and implementation.
